Immunogenic peptide(s) having an HLA-A2.1 binding motif - used for treatment or prophylaxis of cancer, virus infection or autoimmune diseases.

Disclosure; Page 90; 138pp; English.

AAR73058-121 are potential peptide binders of HLA-A2.1 motif. Using motifs disclosed in the invention, these peptides were screened for further motifs. Only peptides with binding affinity of at least 1% (binding affinity is expressed as an IC50 value) as compared to the

                melanoma antigen has an binding value of 0.2200. The peptides of the invention can induce eytotoxic T lymphocytes which can react with target cells. They can be used for the treatment or prophyaxis of cancer, eg. prostate cancer or lymphoma, etc. (Updated on 25-MAR-2003 to correct PN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MAR73685-876 are potential peptide binders of HLA-A2.1 motif. Using motifs disclosed in the invention, these peptides were screened for further motifs. Only peptides with binding affinity of at least 1% (binding affinity is expressed as an ICSO value) as compared to the standard peptide (AAR71293) in assays. This peptide from MAGE3 has a binding value of 0.0550. The peptides of the invention can induce cytotoxic T lymphocytes which can react with target cells. They can be used for the treatment or prophlyaxis of cancer, eg. prostate cancer or lymphoma, etc. (Updated on 25-MAR-2003 to correct PN field.)

MAGEZ and MAGEZ antigens. The peptides can bind to a human leukocyte antigen (HLA) HLA-2.1 and are used to exemplify the method of invention of producing antigen-specific cytotoxic T cells (TTLS) in vitro. The method comprises contacting immunogenic peptides from an antigen that binds class I major histocompatibility complex (MHC) molecules with cantigen presenting cells (AFCS) pretreated with pretreatement growth factors, and incubation growth factors, thereby producing antigence of at least 2 incubation growth factors, thereby producing antigence specific CTLs. A method for specifically killing target cells in a human patient is also provided which comparises obtaining a fluid sample containing CTLs from a patient, contacting the cytotoxic T cells with APCS pretreated with pre-treatment growth factors, where the APCs comprise class I MHC molecules. The pretreated APCs are incubated with the cytotoxic growth factors, thereby producing activated CTLs which are contacted with a carrier to form a composition. The composition can then the cytotoxic growth factors, viral infections, ADCs, hepatitis, bacterial infection, fungal infection, malaria or tuberculosis

AAY5390 to AAY48214 represent specifically claimed immunogenic peptides having a human major histocompatibility complex (WHC) Class I (also known as human leukocyte antigen (HLA) binding motif. The immunogenic peptides can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-A2.1, Al, A3.2 or A34.1 or HLA-B or C) and induce a cytotoxic T cell response against the antigen from which the peptide is derived. Cytotoxic T lymphocytes (CTLs) which destroy antigen-bearing cells are normally induced by an antigen in the form of a peptide fragment bound to a HLA molecule, rather than the intext foresign antigen itself, and are particularly important in tumour rejection and in fighting viral infections. The peptides are therefore useful therapeutically to treat or prevent viral infections and connects in mammals (sepecially humans) e.g. prostate cancer, hepatitis B and C, AIDS, and renal carcinoma. They can be administered as vaccines to elicit an immune response in individuals susceptible or otherwise at risk
                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of viral infection or cancer, or used to treat chronic or acute conditions. They are also useful diagnostically, and can be used to induce a cytotoxic T cell response, by contacting a cytotoxic T cell with the peptide e.g. to produce CTLs ex vivo for infusion back into a patient. The polynucleotides encoding the immunogenic peptides are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunogenic peptide having a human leukocyte antigen binding motif #2014.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New immunogenic peptides with HLA binding motif, useful in treatment and diagnosis of cancers and viral diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    patient. The polynucleotides encoding the immunogenic pertides are also useful therapeutically and for immunisation as above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human leukocyte antigen; binding; immunogenic; glycoprotein; MHC; HLA; immune response; T cell activation; major histocompatibility complex; cytotoxic T lymphocyte; CTL; tumour rejection; viral infection; cancer; prostate cancer; hepatitis B; hepatitis C; AIDS; renal carcinoma;
                                                                               Gaps

The present limention describes Faces, by proper of the present limention describes Faces. (II) a clonal cytocoxic T lymphocyte (CTL) that is cultured in vivo and binds to a complex of (I); (2) a peptide (II) comprising (I) and a second composition comprising (II), a unit dose of a peptide with at least 50 contiguous amino acids with 100% identity to the native peptide sequence of MAGE2/3, and a pharmaceutical excipient; (4) an isolated nucleic acid encoding (I); and (5) an isolated nucleic acid encoding (II). (I) has cytostatic activity, and can be useful for the treatment and immunostimulant. A vaccine of (3) is useful for the treatment and concern (I) is useful for monitoring or evaluating an immunostimulant and leavecyte antigen (HLA) allele present in the continuous accine by incubating a T-lymphocyte sample from a patient with (I) that binds to an human leukocyte antigen (HLA) allele present in the continuous accine allows the opportunity to combine epitopes derived from multiple tumour-associated molecules reducing the likelihood of tumour escape due to antigen loss. AAG84515 to AAG84999 and AAB99725 cumour escape due to antigen less exemplification of the present
                                                                                                                                                                                                                                               Human; human leukocyte antigen; HLA epitope; cytotoxic T lymphocyte; CTL; MAGE2; MAGE3; melanoma antigen gene; immune response; vaccine; cancer; cytostatic; immunostimulant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           present invention describes MAGE2/3 epitopes (I). The present invention describes MAGE2/3 epitopes (I). Also described are:

(1) a clonal cytotoxic T lymphocyte (CTL) that is cultured in vivo and bit of binds to a complex of (I); (2) a peptide (II) comprising (I) and a second epitope and has less than 50 contiguous amino acids; (3) a vaccine complex of composition comprising (II), a unit dose of a peptide with at least 50 contiguous amino acids with 100% identity to the native peptide sequence of MAGE2/3, and a pharmaceutical excipient; (4) an isolated nucleic acid encoding (I); and (5) an isolated nucleic acid encoding (I); and (5) an isolated nucleic acid encoding (II). (I) has cyrocatic activity, and can be used in vaccines and as an immunostimulant. A vaccine of (3) is useful for the treatment and prevention of cancer. (I) is useful for monitoring or evaluating an immunostimulant. A vaccine of (3) is useful for which in the confide. The vaccine allows the opportunity to combine pitopes derived from multiple tumour-associated molecules reducing the likelihood of the multiple tumour-associated molecules reducing the likelihood of tumour escape due to antigen loss. AAG84515 to AAGASOS and AABS9725.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          in a clonal cycotoxic T lymphocyte (CTL) that is cultured in vivo and binds to a complex of [1]; (2) a peptide [1] comprising [1] and a second binds to a complex of [1]; (2) a peptide [1] comprising [1] and a second composition comprising [1], a unit dose of a peptide with at least 50 contiguous amino acids with 100% identity to the native peptide sequence of MARSE2/3, and a pharmaceutical excipient; (4) an isolated nucleic acid encoding [1]; and (5) an isolated nucleic acid encoding [1]. (1] has cytostatic activity, and can be used in vaccines and as an immostimulant. A vaccine of [3] is useful for the treatment and prevention of cancer. (1) is useful for monitoring or evaluating an immune response by incubating a length of monitoring or evaluating an immune response by incubating a length of monitoring or evaluating an immune response by incubating an electronic and detecting the presence of the T-lymphocyte that binds to the peptide. The vaccine allows the opportunity to combine epitopes derived from multiple tumour-associated molecules reducing the likelihood of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a composition (I) comprising at least one peptide that comprises an isolated, prepared epitope consisting of a sequence selected from 25 short amino acid sequences given in AAB9960 to AAB99704. Also described are: (I) a composition (II) comprising one or more peptides, and further comprising at least two epitopes selected from the 25 short amino acid sequences (as above), where each of the one or more peptides comprise less than 50 contiquous amino acids that have 100% identity with a native peptide sequence; and (2) a vaccine composition (III) comprising an epitope selected from the 25 short amino acid and immunomodulatory activities and can be used in vaccine production and immunotherapy. The peptide epitope compositions (I) (II) has cytostatic and immunotherapy. The peptide epitope compositions (I) (II) has cytostatic monitoring an immune response to a tumour associated antigen or when one or more peptides are combined to create a vaccine (III) that stimmlates the callular arm of the immune system. In particular, the vaccine conditions the callular arm of the immune system. In particular, the vaccine and improve the callular defined that the addition of the human leukocyte antigen (HIA)-A2 supertype and improve the callular defined for patients being treated for breast, colon, or lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

This invention relates to a method of enhancing the immunogenicity of a peptide, where the peptide contains a class I epitope. The invention includes methods for preparing peptides containing epitopes which have enhanced ability to effect an immune response (compared to wild-type epitopes). The peptides are referred to as heteroclitic analogues. The method is useful for eliciting an immune response by contacting CTLs with the immunogenically enhanced peptide in vitro in the presence of an antigen presenting cell, or by administering to a subject a nucleic antigen presenting cell, or by administering to a subject a nucleic acid molecule comprising a nucleotide sequence encoding the peptide. The peptides are useful as reagents to evaluate an immune response and the efficacy of the vaccine, and for making antibodies. The heteroclitic analogues are useful in immunological compositions for the treatment of viral diseases, cancer, and other conditions which are characterised by wish and a present of the response and the conditions which are characterised by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Enhancing immunogenicity of peptide containing class I epitope, useful for treating cancer, comprises providing (semi-)conservative amino acid substitutions at specified positions of these epitopes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           displayed antigens on target cells. The present sequence represents a class I epitope which may be used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Exemplary antigen characteristic of tumours and derived from MAGE-A3

                                                                                                                                                 AAB31302-59 represent exemplary antigens which are characteristic of tumours. They can be used to enhance the immune response of vaccines comprising peptides derived from human MAGE-A1 HLA (human leukocyte antigen) class II-binding protein. Peptides derived from the MAGE-A1 HLA binding protein stimulate the activity and proliferation of CD4+T lymphocytes. The MAGE-A1 HLA binding protein is useful as a diagnostic agent for diagnosing a disorder characterized by expression of MAGE-A1. The protein is used for treating a disorder characterized by expression of MAGE-A1 such as cancers e.g. melanomal. Squamous cell carcinomas, colorectal carcinomas, osteosarcomas, and lymphocytic leukemias. Peptides derived from the MAGE-A1 HLA binding protein are useful in the production
                                                                                  Novel MAGE-A1 human leukocyte antigen class II peptides which bind to and are presented to the class II molecules, useful for inducing immune response and treating cancers characterized by expression of MAGE-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Detecting multiple myeloma in a patient, comprises contacting a nucleic acid containing sample taken from bone marrow or blood with a hybridization probe specific for a tumor rejection antigen precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Multiple myeloma; tumour rejection antigen precursor; MAGE; BAGE; GAGE;

The method is useful for providing, identifying and/or optimising peptides that are useful in manufacturing a pharmaceutical composition for the induction of cyctoxic T-lymphocytes, and for the prevention, treatment or diagnosis of cancer or viral infections. The invention is also used in gene therapy. The present sequence is human mage3 peptide used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Providing, identifying or optimizing peptides for inducing cytotoxic T-lymphocytes and for treating cancer, comprises selecting conserved regions in antigenic proteins and identifying CD8+ T-cell epitopes in the
                                                  taken
The present invention relates to a method for detecting multiple myeloma from a contacting a nucleic acid containing a sample taken from a bone marrow or blood of a patient, with a hybridisation probe specific for a tumour rejection antigen precursor. Tumour rejection antigen precursor the MAGE family, BAGE, GAGE, IMGE, NY-ESO-1 and PRAME (previously referred to as DAGE). Expression of the tumour rejection antigen precursor indicates possible multiple myeloma in the patient. The method can also be used for monitoring the disease progress and course of therapeutic regime. The present sequence is a peptide derived from a tumour rejection antigen precursor, which was used in the method of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; T-lymphocyte; vaccine; viral infection; gene therapy; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor.

Transporter, cytoakeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified colypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I MHC-binding polypeptide. The polypeptide is also useful for class II MHC-binding polypeptide. The polypeptides and particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed profiling the above mentioned diseases.
                                           Translational profiling, expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; transcription factor; cancer; MRC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 44; DB 6; L

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method for providing, identifying or/and optimising peptides which induce cytotoxic T-lymphocytes and to the uses of the obtained peptides for vaccination. The method is useful for providing, identifying and/or optimising peptides that are useful in manufacturing a pharmaceutical composition for the induction of cytotoxic T-lymphocytes, and for the prevention, treatment or diagnosis of cancer or viral infections. The invention is also used in gene therapy. The present sequence is human mage9 peptide used to illustrate the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Providing, identifying or optimizing peptides for inducing cytotoxic T-lymphocytes and for treating cancer, comprises selecting conserved regions in antigenic proteins and identifying CD8+ T-cell epitopes in the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

fragment of a kinase, phosphatase, protease, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for dentifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed from WIPO at specification but was obtained in electronic format directly from WIPO at
                                                                Translational profiling; expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MTG; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskelatal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and class I or class II MHC-binding polypeptide. The polypeptides and myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

```
The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for aliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polymentectides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profilling. Note: This sequence does not appear in the printed profit to. "The wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or leukemia.
                                                                  expressed protein tag; BPT; kinase; phosphatase;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and copynucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed profiling to but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor. transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this propeptide, is useful for treating cancer. The polypeptide is also useful for treating cancer. The polypeptide is also useful for treating one. The polypeptide is also class I MHC-binding polypeptide. The polypeptides and polymuclectides are particularly useful for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                            Translational profiling, expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MTG; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        fragment of a kinase, phosphatase, protease, which comprises a tragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and class I or class II MHC-binding polypeptide. The polypeptides and myeloma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents and treating the above mentioned diseases. This sequence represents and profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          o;

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in amammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for treating cancer. The polypeptide is also last I MEC-binding polypeptide. The polypeptides and polymucleotides are particularly useful for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The pulypeptide is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and myeloma, colon cancer, gastric cancer, reating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, astroma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profilling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor.

transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunoganic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide is useful for treating cancer. The polypeptide is also useful for treating cancer. The polypeptide is also useful for treating cancer. The polypeptide is also useful for treating or preventing polynucleotides are particularly useful for treating or preventing
                                                            Translational profiling, expressed protein tag, EPT, kinase, phosphatase, protease, protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The pulypeptide is useful for treating cancer. The polypeptide is also useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypeptides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, recating or preventing myeloma, colon cancer, gastric cancer, needing or preventing myeloma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAR73685-876 are potential peptide binders of HLA-A2.1 motif. Using motifs disclosed in the invention, these peptides were screened for further motifs. Only apptides with binding affinity of at least 1% (binding affinity is expressed as an ICSO value) as compared to the standard peptide (AAR71293) in assays. This peptide from MAGE3 has a binding value of 0.0120. The peptides of the invention can induce cytotoxic T lymphocytes which can react with target cells. They can be used for the treatment or prophlyaxis of cancer, eg. prostate cancer or lymphoma, etc. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The present invention describes MAGE2/3 epitopes (I). Also described are:

(1) a clonal cytotoxic T lymphocyte (CTL) that is cultured in vivo and binds to a complex of (I); (2) a peptide (II) comprising (I) and a second epitope and has less than 50 contiguous amino acids; (3) a vaccine composition comprising (II), a unit dose of a peptide with at least 50 contiguous amino acids with 100% identity to the native peptide sequence of MAGE2/3, and a pharmaceutical excipient; (4) an isolated nucleic acid encoding (I); and (5) an isolated nucleic acid encoding (I). (I) has cytostatic activity, and can be used in vaccines and as an context activity, and can be used in vaccines and as an context of activity, and can be used in vaccines and as an context of activity, and can be used in vaccines and as an context of activity, and can be used in vaccines and as an context of activity, and can be used in vaccine and as an action of cancer. (I) is useful for monitoring or evaluating an immune response by incubating a T-lymphocyte sample from a patient with patient and detecting the presence of the T-lymphocyte that binds to the patient and detecting the presence of the T-lymphocyte that binds to the patient and detecting the presence of the T-lymphocyte that binds to the peptide. The vaccine allows the opportunity to combine epitopes derived throw rescape due to antigen loss. AAG84515 to AAG84909 and AAB99725 compresent amino acid sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; human leukocyte antigen; HLA epitope; cytotoxic T lymphocyte; CTL; MAGE2; MAGE3; melanoma antigen gene; immune response; vaccine; cancer;
                                                                                                                                                                                                                                                                                                                                   An isolated prepared MAGE2/3 epitope (I) for use in pharmaceuticals for the treatment and prevention of cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAY45390 to AAY48214 represent specifically claimed immunogenic peptides
having a human major histocompatibility complex (MHC) Class I (also known
as human leukocyte antigen (HLA)) binding motif. The immunogenic peptides
can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-A2.1, A1, A3.2
or A24.1 or HLA-B or C) and induce a cytotoxic T cell response against
the antigen from which the peptide is derived. Cytotoxic T lymphocytes
(CTLS) which destroy antigen-bearing cells are normally induced by an
antigen in the form of a peptide fragment bound to a HLA molecule, rather
than the intact foreign antigen itself, and are particularly important in
the intact foreign antigen itself, and are particularly important in
the intact foreign antigen itself, and are particularly important in
the intact foreign in fighting viral infections. The peptides are
therefore useful therapeutically to treat or prevent viral infections and
cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B
and C, AIDS, and renal carcinoma. They can be administered as vaccines to
elicit an immune response in individuals susceptible or otherwise at risk
of viral infection or cancer, or used to treat chronic or acute
conditions. They are also useful diagnostically, and can be used to
the peptide e.g. to produce CTLs ex vivo for infusion back into a
the peptide e.g. to produce CTLs ex vivo for infusion back into a
patient. The polymucleotides encoding the immunogenic peptides are also
useful therapeutically and for immunisation as above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                  The present invention describes MAGE2/3 epitopes (I). Also described are:

(1) a clonal cytotoxic T lymphocyte (CTL) that is cultured in vivo and binds to a complex of (I); (2) a peptide (II) comprising (I) and a second epitope and has less than 50 contiguous amino acids; (3) a vaccine composition comprising (II), a unit dose of a peptide with at least 50 contiguous amino acids with 100% identity to the native peptide sequence of MAGE2/3, and a pharmaceutical excipient; (4) an isolated nucleic acid encoding (II); and (5) an isolated nucleic acid encoding (II). (I) has contextic activity, and can be used in vaccines and as an immunostimulant. A vaccine of (3) is useful for the treatment and prevention of cancer. (I) is useful for monitoring or evaluating an immune response by incubating a T-lymphocyte sample from a patient with (I) that binds to an human leukcyte antigen (HLA) allele present in the patient and detecting the presence of the T-lymphocyte that binds to the peptide. The vaccine allows the opportunity to combine epitopes derived tumour escape due to antigen loss. AAG84515 to AAG84909 and AAB99725 tumour escape due to antigen loss. AAG84515 to AAG84909 and AAB99725 in present amino acid sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Translational profiling, expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

fragment of a kinase, phosphatase, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class I which will be polypeptide and properties are particularly useful for treating or preventing concer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed generally profiling politing was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Translational profiling, expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

                                                                                                                                                                                                                     fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The pulypeptide is useful for treating cancer. The polypeptide is also polypeptide. The purified polypeptide or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polymeleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, astroma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational pofitication but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Translational profiling, expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; WHC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

fragment of a kinase, phosphatase, protease, which complaises a transporter, cytoskeletal protein, receptor or transcription factor. The colypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified colypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polymentectides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (BFT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed capening inclination but was obtained in electronic format directly from WIPO at ftp. Wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Translational profiling, expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                           New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a purified polypeptide, which comprises a

                                                                                                                                                                                                                fragment of a kinase, phosphatase, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MRC-binding polypeptide. The polypeptides and useful for class is a particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed sequence does not appear in the printed sequence does not appear in the printed sequence of a specification but was obtained in electronic format directly from WIPO at

fragment of a kinase, phosphatese, protesse inhibitor, tragment of a kinase, phosphatese, protesse inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class I MHC-binding polypeptide. The polypeptides and useful for identifying compounds that binds to a naturally processed class I or class I MHC-binding polypeptide. The polypeptides and myeloma, colon cancer, gastric cancer, adenocarcinoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expensional profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Melanoma associated antigen-3; MAGE-3; immunogenic peptide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                           AAB08827-37 represent melanoma associated antigen (MAGE)-3 derived mimunogenic peptides. The peptides are capable of binding to major histocompatibility complex (MHC) class II molecules. Stimulation with the peptides induces proliferation of CD4+T cells, and of their cytolytic activity. CD4+T cells exposed to the peptides were able to cause lysis of melanoma cells expression MAGE-3 and HAL-DR molecules. The peptides are useful for inducing an immune response against tumour cells expressing a MAGE-3 antigen. They are also useful for the preparation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes MAGE2/3 epitopes (I). Also described are: (1) a clonal cytotoxic T lymphocyte (CTL) that is cultured in vivo and binds to a complex of (I); (2) a peptide (II) comprising (I) and a second epitope and has less than 50 contiguous amino acids; (3) a vaccine composition comprising (II), a unit dose of a peptide with at least 50 contiguous amino acids with 100% identity to the native peptide sequence (MAGE2/3, and a pharmaccutical excipient; (4) an isolated mucleic acid encoding (I); and (5) an isolated mucleic acid encoding (II). (I) has cytostatic activity, and can be used in vaccines and as an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; human leukocyte antigen; HLA epitope; cytotoxic T lymphocyte; CTL;

immunostimulant. A vaccine of (3) is useful for the treatment and prevention of cancer. (1) is useful for monitoring or evaluating an immune response by incubating a T-1ymphocyte sample from a patient with (1) that binds to an human leukcoyte antigen (HLA) allele present in the patient and detecting the presence of the T-1ymphocyte that binds to the peptide. The vaccine allows the opportunity to combine epitopes derived from multiple tumour-associated molecules reducing the likelihood of tumour escape due to antigen loss. AAG84515 to AAG84909 and AAB99725 represent amino acid sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease inhibitor. Liagment of a kinase, phosphatase, protease inhibitor. Liamsporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal, an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Translational profiling, expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; resector; transcription factor; cancer; MIC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease inhibitor. transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also
useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polynucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed epecification but was obtained in electronic format directly from WIPO at

ö
useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polynucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (BFT) isolated from human tissue for translational profilling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a peptide derived from the MAGE-3 protein. This protein is encoded by the MAGE-3 tumour associated gene. Peptides (AAY01721-25) that bind human leucocyte antigen (HLA) Class II molecules can be derived from the MAGE-3 protein. These peptides and autologous CD4+ cells that bind to a complex of MAGE-3 peptide and HLA Class II, are used to treat MAGE-3 related diseases, particularly cancers (e.g. melanoma, osteosarcoma, leukemia and various forms of carcinoma). The peptides are also used to produce specific antibodies. Detection of of the peptides, e.g. in binding assays, particularly with antibodies, is used for diagnosis of such diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MAGE-3 tumour associated gene; human leucocyte antigen Class II; autologous CD4+ cell; MAGE-3 related disease; cancer; melanoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated peptides that bind to human leucocyte antigen class II

The CTL clones isolated recognize specific antigens deptides of proteins, preferably of the MAGS family. The APC is autologous and each expression systems is different from at least one of the other expression systems; therefore isolating a cytoxoic T cell clone specific for the protein. The method can also be used to identify an antigenic peptide epitope. Isolated CTL clones specific for a peptide/human leukocyte antigen (HLA) complex are claimed. The CTL cells specific for the complexes, peptides or cells which present the complexes on the cell surface are useful for treating pathological conditions characterized by abnormal expression of the complexes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Lurquin C, Traversari C;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 20, Application US/08667725B
Patent No. 6063900
GENERAL INFORMATION:
APPLICANT: Melief, Cornelis J. M.
APPLICANT: Yisseren, M. J. W.
APPLICANT: Kast; W. M.
APPLICANT: And der Bruggen, Pierre
APPLICANT: Boon-Falleur, Thierry
TITLE OF INVENTION: Isolated Tumor Rejection Antigen
TITLE OF INVENTION: Precursor MAGE-2 Derived Peptides, and Uses Thereof
                Sequence 20, Application US/08687226
Patent No. 5686068
GENERAL INFORMATION:
APPLICANT: Melief, Cornelis J. M.; Visseren, M. W.;
APPLICANT: wan der Burg, Sjoerd; van der Bruggen, Pierre;
APPLICANT: Boon-Falleur, Thierry
TITLE OF INVENTION: Isolated Peptides Derived From
TITLE OF INVENTION: Peptides And HLA-A2 Molecules, And Uses Thereof
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .
